

Translating

Use the **Transform** menu to make a translated image of an object.

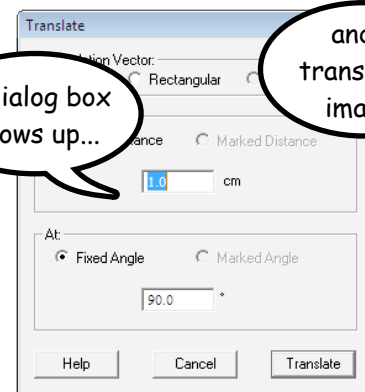

©2009 Key Curriculum Press

Select objects to translate...

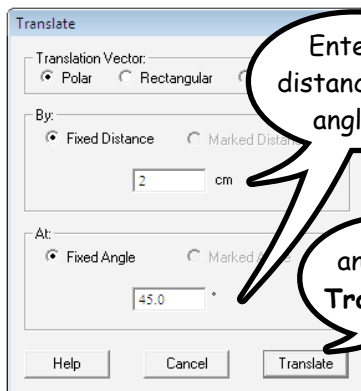

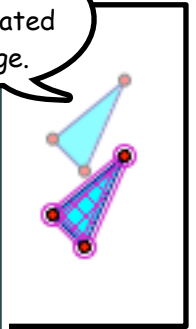

and chose **Transform | Translate.**

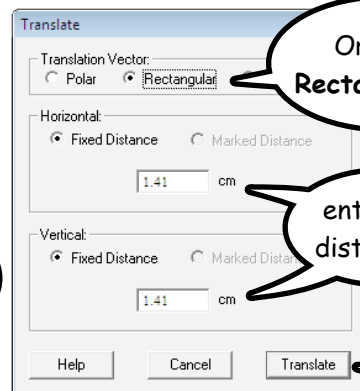

A dialog box shows up...

and a translated image.

Enter a distance and angle...

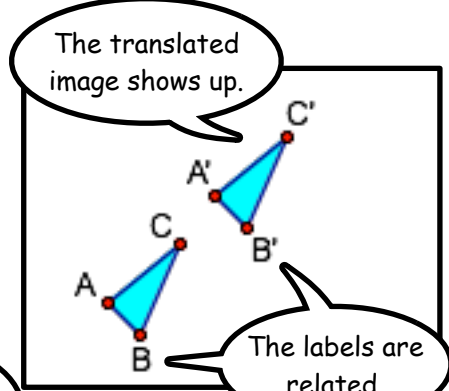

and click **Translate.**

Or, click **Rectangular...**

enter two distances...

and click **Translate.**

The translated image shows up.

The labels are related.

Translate by a Vector

Select the starting and ending points of the vector.

and chose **Transform | Mark Vector.**

A quick animation shows the direction and distance.

Select objects to translate...

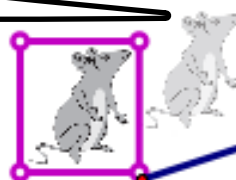

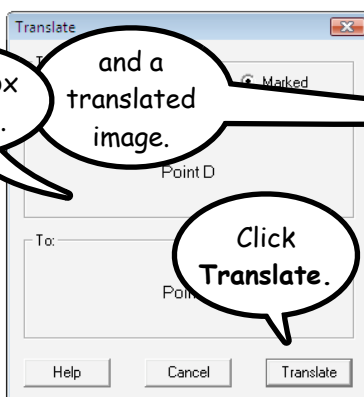

and chose **Transform | Translate.**

A dialog box shows up...

and a translated image.

Click **Translate.**

Drag an endpoint of the vector...

and the image moves.
